To whom it may concern

This is to confirm, that my group of Combustion Technology at Karlsruhe Institute of Technology is supporting Ing. De la Sovera continuously in developing new concepts for low NOx combustion technologies and carbon-free fuels. The support particularly comprises numerical simulations of combustors and combustion systems. On the basis of the results of this kind of numerical simulations optimization of combustors and concepts in an interactive mode is performed. Results of this process in the form of progress reports are at hand of Ing. de la Sovera and may be disclosed at any time.

Sincerely,

(Prof. Dr.-Ing. H. Bockhorn)
